The Ten Surprises of 2018

These surprises were announced Tuesday, January 2, 2018. The definition of a surprise is an event that the average investment professional would assign a one out of three chance of taking place, but where I believe the event is probable, with better than a 50% chance of happening.

1. China finally decides that a nuclear capability in the hands of an unpredictable leader on its border is not tolerable even though North Korea is a communist buffer between itself and democratic South Korea. China cuts off all fuel and food shipments to North Korea, which agrees to suspend its nuclear development program but not give up its current weapons arsenal.

2. Populism, tribalism and anarchy spread around the world. In the United Kingdom Jeremy Corbyn becomes the next Prime Minister. In spite of repressive action by the Spanish government, Catalonia remains turbulent. Despite the adverse economic consequences of the Brexit vote, the unintended positive consequence is that it brings continental Europe closer together with more economic cooperation and faster growth.

3. The dollar finally comes to life. Real growth exceeds 3% in the United States, which, coupled with the implementation of some components of the Trump pro-business agenda, renews investor interest in owning dollar-denominated assets, and the euro drops to 1.10 and the yen to 120 against the dollar. Repatriation of foreign profits held abroad by U.S. companies helps.

4. The U.S. economy has a better year than 2017, but speculation reaches an extreme and ultimately the S&P 500 has a 10% correction. The index drops toward 2300, partly because of higher interest rates, but ends the year above 3000 since earnings continue to expand and economic growth heads toward 4%.

5. The price of West Texas Intermediate Crude moves above $80. The price rises because of continued world growth and unexpected demand from developing markets, together with disappointing hydraulic fracking production, diminished inventories, OPEC discipline and only modest production increases from Russia, Nigeria, Venezuela, Iraq and Iran.
The Ten Surprises of 2018 (Cont’d)

6. Inflation becomes an issue of concern. Continued world GDP growth puts pressure on commodity prices. Tight labor markets in the industrialized countries create wage increases. In the United States, average hourly earnings gains approach 4% and the Consumer Price Index pushes above 3%.

7. With higher inflation, interest rates begin to rise. The Federal Reserve increases short-term rates four times in 2018 and the 10-year U.S. Treasury yield moves toward 4%, but the Fed shrinks its balance sheet only modestly because of the potential impact on the financial markets. High yield spreads widen, causing concern in the equity market.

8. Both NAFTA and the Iran agreement endure in spite of Trump railing against them. Too many American jobs would be lost if NAFTA ended, and our allies universally support continuing the Iran agreement. Trump begins to think that not signing on to the Trans-Pacific Partnership was a mistake as he sees the rise of China’s influence around the world. He presses for more bilateral trade deals in Asia.

9. The Republicans lose control of both the Senate and the House of Representatives in the November election. Voters feel disappointed that many promises made during Trump’s presidential campaign were not implemented in legislation and there is a growing negative reaction to his endless Tweets. The mid-term election turns out to be a referendum on the Trump Presidency.

10. Xi Jinping, having broadened his authority at the 19th Party Congress in October, focuses on China’s credit problems and decides to limit business borrowing even if it means slowing the economy down and creating fewer jobs. Real GDP growth drops to 5.5%, with only minor implications for world growth. Xi proclaims this move will ensure the sustainability of China’s growth over the long term.
The Ten Surprises of 2019

These surprises were announced Thursday, January 3, 2019. The definition of a surprise is an event that the average investment professional would assign a one out of three chance of taking place, but where I believe the event is probable, with better than a 50% chance of happening.

1. The weakening world economy encourages the Federal Reserve to stop raising the federal funds rate during the year. Inflation remains subdued and the 10-year Treasury yield stays below 3.5%. The yield curve remains positive.

2. Partly because of no further rate increases by the Federal Reserve and more attractive valuations as a result of the market decline at the end of 2018, the S&P 500 gains 15% for the year. Rallies and corrections occur but improved earnings enable equities to move higher in a reasonably benign interest rate environment.

3. Traditional drivers of GDP growth, capital spending and housing, make only modest gains in 2019. The expansion continues, however, because of consumer and government spending. A recession before 2021 seems unlikely.

4. The better tone in the financial markets discourages precious metal investors. Gold drops to $1,000 as the equity markets in the United States and elsewhere improve.

5. The profit outlook for emerging markets brightens and investor interest intensifies because the price earnings ratio is attractive compared to developed markets and historical levels. Continuous expansion of the middle class in the emerging markets provides the consumer buying thrust for earnings growth. China leads and the Shanghai composite rises 25%. The Brazil equity market also comes to life under the country’s new conservative leadership.
6. March 29 comes and goes and there is no Brexit deal. Parliament fails to approve one and Theresa May, arguing that a change in leadership won’t help the situation, remains in office. A second referendum is held and the U.K. votes to remain.

7. The dollar stabilizes at year-end 2018 levels and stays there throughout the year. Because of concern about the economy, the Federal Reserve stops shrinking its balance sheet, which is interpreted negatively by currency traders. The flow of foreign capital into United States assets slows because of a softer monetary policy and a lack of need for new capital for business expansion.

8. The Mueller investigation results in indictments against members of the Trump Organization closest to the president but the evidence doesn’t support any direct action against Trump himself. Nevertheless, an exodus of Trump’s most trusted advisors results in a crisis in confidence that the administration has the people and the process to accomplish important goals.

9. Congress, however, with a Democratic majority, gets more done than expected, particularly on trade policy. Progress is made in preserving important parts of the Affordable Care Act and immigration policy. A federal infrastructure program to be implemented in 2020 is announced.

10. Growth stocks continue to provide leadership in the U.S. equity market. Technology and biotech do well as a result of continued strong earnings. Value stocks other than energy-related businesses disappoint because of the slowing economy.
The Also Rans of 2019

Every year there are always a few Surprises that do not make the Ten either because I do not think they are as relevant as those on the basic list or I am not comfortable with the idea that they are “probable.”

11. Geopolitical tensions increase. Iran continues to destabilize the Middle East and Kim Jong Un fails to live up to his North Korea denuclearization promises. Secretary of State Pompeo and National Security Advisor Bolton make statements indicating the United States may take pre-emptive action in both places, thereby causing one of several sharp market sell-offs. But in spite of hostile rhetoric, the United States does not go to war with anyone as we approach the 2020 election. Trump’s tough talk on some issues like trade works, however, and leads to successful diplomatic negotiations on national security.

12. In desperation China engages in ambitious infrastructure programs to bolster its economy. China grows at 6.5% real, but the increased debt causes concern around the world and has a negative impact on the renminbi.

13. China announces, “We want to be the world leaders in free trade.” It sends envoys around the globe to negotiate better bilateral trade terms in order to offset the losses from the ongoing U.S. disagreements. Joint ventures in which foreign companies control the majority share are initiated in all sectors, from industrials and autos to raw materials. As China’s influence around the world becomes greater, the U.S. further isolates itself.

14. The European Central Bank is forced to restart quantitative easing in response to a defiant Italy, a weakening Germany and Brexit. Thwarting expectations that Brexit would bring the rest of Europe closer together, Italy realizes that it can break all fiscal rules without any fear of punishment from the E.U. As a result, the Italian economy falls into recession, debt spreads surge and the ECB is forced to liquefy the system again.

Appendix – Life’s Lessons
Here are some of the lessons I have learned in my first 80 years. I hope to continue to practice them in the next 80

1. Concentrate on finding a big idea that will make an impact on the people you want to influence. The Ten Surprises, which I started doing in 1986, has been a defining product. People all over the world are aware of it and identify me with it. What they seem to like about it is that I put myself at risk by going on record with these events which I believe are probable and hold myself accountable at year-end. If you want to be successful and live a long, stimulating life, keep yourself at risk intellectually all the time.

2. Network intensely. Luck plays a big role in life, and there is no better way to increase your luck than by knowing as many people as possible. Nurture your network by sending articles, books and emails to people to show you’re thinking about them. Write op-eds and thought pieces for major publications. Organize discussion groups to bring your thoughtful friends together.

3. When you meet someone new, treat that person as a friend. Assume he or she is a winner and will become a positive force in your life. Most people wait for others to prove their value. Give them the benefit of the doubt from the start. Occasionally you will be disappointed, but your network will broaden rapidly if you follow this path.

4. Read all the time. Don’t just do it because you’re curious about something, read actively. Have a point of view before you start a book or article and see if what you think is confirmed or refuted by the author. If you do that, you will read faster and comprehend more.

5. Get enough sleep. Seven hours will do until you’re sixty, eight from sixty to seventy, nine thereafter, which might include eight hours at night and a one-hour afternoon nap.

6. Evolve. Try to think of your life in phases so you can avoid a burn-out. Do the numbers crunching in the early phase of your career. Try developing concepts later on. Stay at risk throughout the process.
7. Travel extensively. Try to get everywhere before you wear out. Attempt to meet local interesting people where you travel and keep in contact with them throughout your life. See them when you return to a place.

8. When meeting someone new, try to find out what formative experience occurred in their lives before they were seventeen. It is my belief that some important event in everyone’s youth has an influence on everything that occurs afterwards.

9. On philanthropy my approach is to try to relieve pain rather than spread joy. Music, theatre and art museums have many affluent supporters, give the best parties and can add to your social luster in a community. They don’t need you. Social service, hospitals and educational institutions can make the world a better place and help the disadvantaged make their way toward the American dream.

10. Younger people are naturally insecure and tend to overplay their accomplishments. Most people don’t become comfortable with who they are until they’re in their 40’s. By that time they can underplay their achievements and become a nicer, more likeable person. Try to get to that point as soon as you can.

11. Take the time to give those who work for you a pat on the back when they do good work. Most people are so focused on the next challenge that they fail to thank the people who support them. It is important to do this. It motivates and inspires people and encourages them to perform at a higher level.

12. When someone extends a kindness to you write them a handwritten note, not an e-mail. Handwritten notes make an impact and are not quickly forgotten.

13. At the beginning of every year think of ways you can do your job better than you have ever done it before. Write them down and look at what you have set out for yourself when the year is over.

14. The hard way is always the right way. Never take shortcuts, except when driving home from the Hamptons. Short-cuts can be construed as sloppiness, a career killer.
Life’s Lessons (Cont’d)

15. Don’t try to be better than your competitors, try to be different. There is always going to be someone smarter than you, but there may not be someone who is more imaginative.

16. When seeking a career as you come out of school or making a job change, always take the job that looks like it will be the most enjoyable. If it pays the most, you’re lucky. If it doesn’t, take it anyway, I took a severe pay cut to take each of the two best jobs I’ve ever had, and they both turned out to be exceptionally rewarding financially.

17. There is a perfect job out there for everyone. Most people never find it. Keep looking. The goal of life is to be a happy person and the right job is essential to that.

18. When your children are grown or if you have no children, always find someone younger to mentor. It is very satisfying to help someone steer through life’s obstacles, and you’ll be surprised at how much you will learn in the process.

19. Every year try doing something you have never done before that is totally out of your comfort zone. It could be running a marathon, attending a conference that interests you on an off-beat subject that will be populated by people very different from your usual circle of associates and friends or traveling to an obscure destination alone. This will add to the essential process of self-discovery.

20. Never retire. If you work forever, you can live forever. I know there is an abundance of biological evidence against this theory, but I’m going with it anyway.
